

MVP PRINTSTATION

The MVP Printstation combined with our reliable HP based printer solutions consistently provides repeatable high resolution images and barcodes.

Stable platform featuring continuous steel reinforced timing belts that “grip” onto corrugate material.

- No speed variations caused by belt slippage
- No uneven joints on the belts
- No more case slippage with top down guides and high friction belts
- Spring loaded guides on both sides and top of the case

Designed to handle non-uniform cases. Boxes coming out of a case erector are rarely uniform and in many instances, do not rest flat on a surface. We’ve designed the Printstation to handle this by:

- Supporting the case at its edges which keeps the case orientation consistent throughout the printing process
- Spring loading our guides to account for wide variations in box width and height

Easy change over from one case size to another. All adjustments are made using geared linear slides with hand cranks allowing easy job setup.

Print reliable code 128 barcodes. With high resolution HP technology (up to 600 dpi) and the RSI Printstation, our customers have the tools to reliably print dense 128 codes.

Contact RSI and get the fully story on the MVP Printstation.
